### Special Wisdom Routerier Extraction Forceps

Their offset design will allow you to reach around obstacles and protect the corners of patient's mouth whenever their mouth openings are restricted or their jaws have been firmly clamped in position. Their slim compact design allows readily accessing molar areas.

### EXTRACTION FORCEPS # ATRAUMATIC

#### Forceps "Blade Beaks"

1. "Blade Beaks" smoothly penetrate in contact with the root.
2. They has large contact surface for a secure grip.
3. They take care of the tissues and assure tooth fracture risk reduction.
4. They give better control over the root during the extraction operations.

### EXTRACTION FORCEPS # SECURE

#### Secure-Line Extraction Forceps

These forceps will allow you to complete any extraction and work more efficiently even if complications arise. If teeth break during extraction, these are the tools you need to rapidly, safely solve your problems. These forceps have special, all-purpose, jaws designed to cover a broad range of applications and have sharp pointed tips that allow separating the tips of roots from surrounding tissues by lightly twisting them and then securely trapping the extracted roots in the gaps between their jaws.

### INTRALIGAMENTAL SYRINGE - INJECT

SPS-SYR11

*"Suitable for uppers and lowers, just turning the front barrel"*

#### ADVANTAGES OF INTRALIGAMENTAL ANESTHESIA:

- Automatic limitation of the power pressure.
- Anesthetizing of a single tooth.
- No numbness of the tongue, lips or cheek.
- Simultaneous treatment of teeth in different quadrants.
- Supports regional block anesthesia.
- Eliminates the risk of hematoma.
- Lower emotional impact on patient.

#### WHY INTRALIGAMENTAL IS BETTER

*Because it's chrome free.*

*Because you can get a better sterilization.*

*Because you can use for long time*

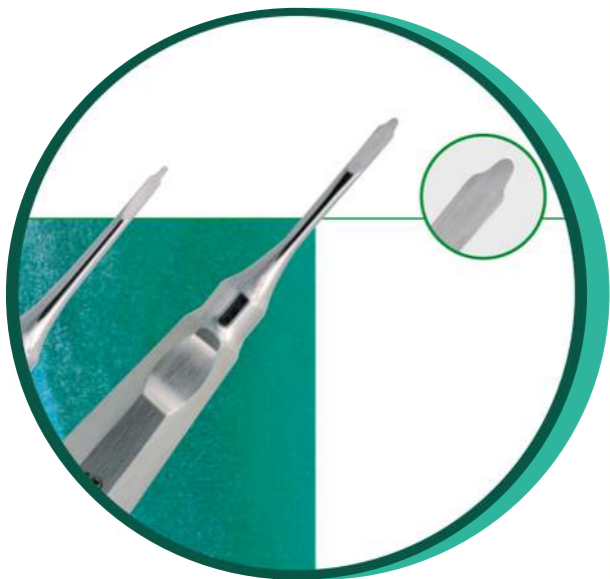

*Because has anti-reflection surface.*

#### OPERATING FEATURES:

- Fully autoclavable.
- Removable headpiece with angled threaded nozzle for the injection needle.
- Viewing chamber with safety sleeve for corpule cartridge.
- Handle servo dosing lever with optimal support for index finger for a gradual advance of the dosing plunger resetting key.
- No waiting time between injections and beginning of treatment.
- Excellent depth of anesthesia combined with shorter duration.
- Much less pain than standard injections (infiltration anesthesia in hard palate, intrapulpal or intraseptal injections or for papillectomy).
- A smaller quantity of given anaesthetic (1-0,06 ml for single injection/click.)
- Needle suggested: 30G.

LUXATIP

[www.sprimesurgico.com](http://www.sprimesurgico.com)

### LUXATIP

### GDC Luxatip Luxation Instrument

Over recent years, there has been an increased demand for reduced trauma during extraction procedures. The use of elevators has become widespread for the loosening of teeth before the application of forceps. GDC Luxation instruments tips are more finely tapered than elevator tips. Their characteristics are a combination of a Perioste and an elevator. The sharp tip enables more efficient cutting of the periodontal ligament, whilst the tapering shaft assists with controlled expansion of the bony socket. The extraction operation may be performed with the minimum amount of tissue damage. Healing is therefore quicker and the operation is less distressing for the patient and surgical team alike.

**The GDC Luxatip Kit comprises of seven Luxation instruments, a straight, curved, inverted curved & contra blade version in three different widths. Also available in dual edge blades**

- L-25 Straight Blade- Green- 2 mm- Apical and/or Interproximal
- L-3C Curved Blade- Black- 3 mm General use/ Starter
- L-3S Straight Blade- Grey- 3 mm Interproximal
- L-3CA Contra Angle- Blue- 3 mm Lingual and/or distal-Molars
- L-3IC Inverted Curved- Light Blue- 3 mm- General, Lingual and/or Distal
- L5C Curved Blade- Brown- 5 mm- Large molar roots- General use
- L5S Straight Blade- Yellow- 5 mm- Interproximal
- DE3 dual edge/straight grey 3 mm/1.5 mm
- DE5 dual edge/straight brown 5 mm/3 mm Deep fractured/Decayed Roots

## COMPOSITE INSTRUMENTS TITANIUM BLUE

## COMPOSITE INSTRUMENTS TITANIUM GOLD

### COMPOSITE INSTRUMENTS

Five specially designed anterior composite instruments to be used for placing, condensing and carving composite materials.

Available as a kit or individually.

#### ANTERIOR KIT

**SPS-TNCIPCL**

For final placement in Class I and II restorations. The larger, round ball end is used for condensing and shaping in Class I and II restorations and on lingual surfaces of anterior teeth.

**SPS-TNCIGFT3**

Flexible, reversed, flared paddle design for shaping and placement of Class III and IV restorations.

**SPS-TNCIPCM**

For small pits and fissures, as well as placement and condensing with limited access.

**SPS-TNCIPCS**

Mini-Mini for extremely small pits and fissures.

**SPS-TNCIGFTMI1**

Mini version of the TNCIGFT1 for small pits and fissures, tunnel preparations or minor tooth defects on lower anterior.

#### POSTERIOR KIT

Five posterior composite instruments specially designed for class I and II restorations.

Available as a kit or individually.

**SPS-TNPLGH3**

Rectangular-shaped plunger for use with condensable composite material in posterior restorations.

**SPS-TNPLGOT**

Rounded-shaped plunger for use with condensable composite material in posterior restorations.

**SPS-TNCFIS/M**

Rounder cone-shaped pointed instrument designed to provide improved contact leveling for small/medium Class II restorations.

**SPS-TNCFIM/L**

Rounder cone-shaped instrument to provide improved contact leveling for medium/large Class II restorations.

**SPS-TNPLGSA**

Small, round, inverted cone plunger for use with condensable composite material in posterior restorations.

#6

Small universal style with rounded plunger tip and a narrow profile for initial placement and contouring of Class I and II restorations.

Large universal style for final placement and contouring of Class I, II and III restorations.

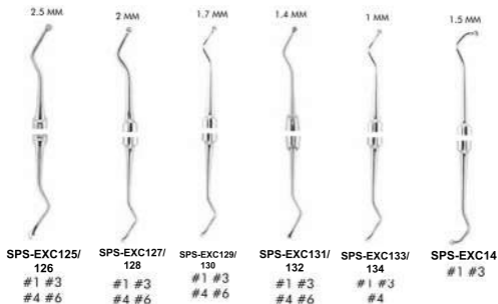

Flexible, reversed, flared profile design for shaping and placement of Class III and IV restorations.

Flexible, pointed, offset, postshaped blade for placing and shaping material on proximal, mesial and distal surfaces. Reverse angle is also useful for placing and shaping cement bonded restorations.

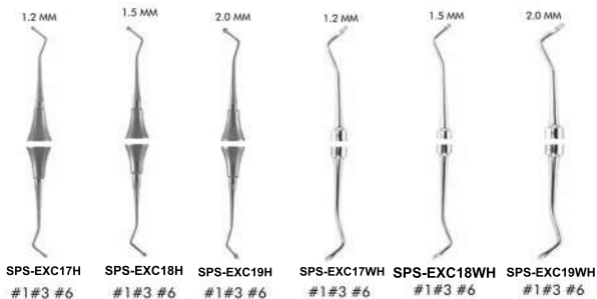

Mini version of the CIGFT. Can also be used for packing gingival retractor cord.

Mini version of the CIGFT for small pits and fissures, tapered preparations or minor tooth defects on lower anterior.

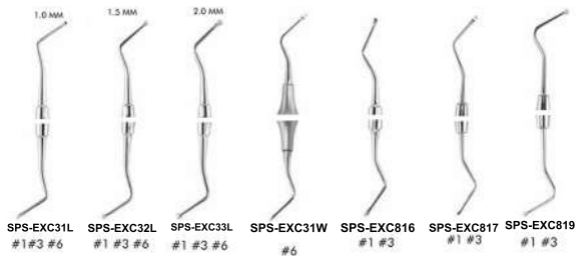

### SPOON EXCAVATOR

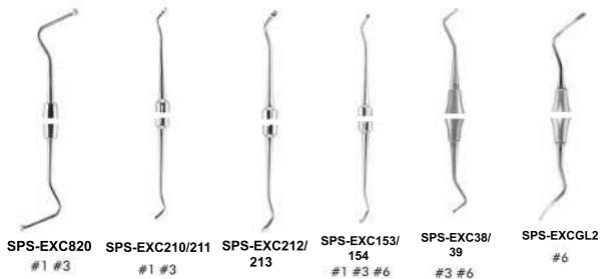

### OVAL SPOON

### SPOON EXCAVATOR

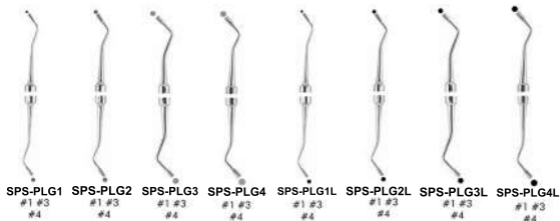

### DARBY-PERRY

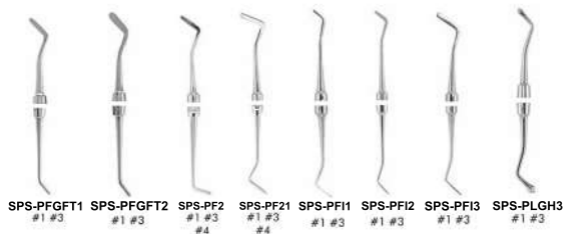

### PLUGGER / CONDENSERS

Used to pack filling materials into cavity preparations.

### PLASTIC FILLING INSTRUMENTS

### BURNISHER

Designed to condense, smooth, carve and polish amalgam

### PLACEMENT INSTRUMENTS

Used to place base or liner within cavity preparations.

Calcium hydroxide or glass ionomer base/liner placement instrument. Also useful as a small burnisher.

Calcium hydroxide or glass ionomer base/liner placement instrument combined with a mini-spatula for efficient mixing.

Calcium hydroxide or glass ionomer base/liner placement instrument.

### HIRSCHFELD FILE

Used to crush and remove heavy calculus deposits.

### PERIODONTAL FILES

Used interproximally. Files surfaces on both sides allow for push or pull application.

### OCHSENBEIN CHISEL

Useful for recontouring bone. The semi-circular notches are beveled on each side. Can also be used to reflect flaps or remove secondary palatal flaps.

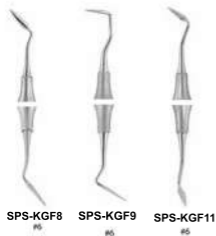

### RHODES BACK ACTION

Designed for recontouring bone. Particularly valuable for removal of wisdom teeth on difficult to reach distal surfaces of posterior teeth.

#### PERIOTOMES

Thin sharp blades used to facilitate the removal of teeth with minimal damage to the surrounding alveolar bone by severing the periodontal ligament. May be used wherever an extraction is indicated, but are particularly important when considering the placement of a dental implant.

#### Terms of Use

##### Removal of:-

- Permanently cemented crowns and /or bridges
- Temporarily cemented provisional or final restorations
- Maryland bridges
- Orthodontic brackets/bands
- Removable appliances "stuck" at attachments
- Multi-unit restoration "stuck" on working lab model

#### Basic Kit Includes:-

- Crown and Bridge Remover # CR5/CRP
- Single crown remover tip # CR1
- Crown remover tip Bifid # CR2
- Crown & bridge removing tip Sickle # CR3
- Single crown remover Contra angle tip # CR4
- Single crown remover tip Inverted curved # CR5
- Single Crown remover tip straight # CR6

SPS-CR8

- Bridge remover Flexi-wire set # CR7
- Bridge remover tip with lock # CR8
- Tips adjustment Key # CR9
- Open-end adjustment wrench # CR10

#### Precautions

1. To remove crowns placed over pins or screw-type posts, use lowest "strike intensity" to prevent fracture.
2. This instrument could cause damage to the margins of soft gold crowns. If re-use is anticipated, cut a small groove parallel to the lingual margin.
3. Highest strike intensity could cause root fracture; be careful in long span restorations.
4. Only low intensity strike force should be used with teeth having high mobility and little bone support.
5. For highest strike intensity settings, let the individual situation and common sense prevail.
